Objective

I am eager to start my career in cloud computing, where I can apply my technical skills and keep learning new technologies. My goal is to contribute to building secure and scalable cloud solutions while growing as a professional and adding value to the team.

Experience

- **RacksonsIt** 10 July 2024 - 10 Aug 2024
  Data science Intern
  Worked with Python libraries like Pandas and NumPy for data cleaning, preprocessing, and analysis.

  Built machine learning models using Scikit-learn, including Decision Tree for classification and prediction tasks.

  Visualized data insights using Matplotlib for better understanding and reporting.

  Performed feature selection, model evaluation, and basic performance tuning on real datasets.

- **SYSTEM TRON** 25 March 2024 - 21 April 2024
  DSA Intern
  Completed a Software Development Internship at System Tron with a strong focus on Data Structures and Algorithms using C++.

  Implemented core DSA concepts including arrays, strings, linked lists, stacks, queues, recursion, and basic tree structures to solve real-world coding problems.

- **A G Eletro Motor** 10/01/2025 - 10/02/2025
  MOTOR MANUFACTURING INTER
  Manufacturing Motor
  Production of Motors
  Quality Motors

Education

Course / Degree	School / University	Grade / Score	Year
B. Tech in Electrical and Computer (Pursuing)	Adarsh Institute of Technology and Research centre,vita		2026
HSC	Maharashtra Udyagiri Mahavidyalaya Udgir	63.30	2022
SSC	Sangram Smarak Vidyalaya Udgir	80.20	2020

Skills

- Python
- AWS
- HTML
- CSS
- JavaScript
- Java
- Angular
- React

Projects

- **Email spamming**

  Worked with Python libraries like Pandas and NumPy for data cleaning, preprocessing, and analysis.

  Built machine learning models using Scikit-learn, including Decision Tree for classification and prediction tasks.

  Visualized data insights using Matplotlib for better understanding and reporting.

  Performed feature selection, model evaluation, and basic performance tuning on real datasets.
- **Automatic Battery swapping station**

  Designed software control logic for EV battery swapping using Python, managing battery identification, swap sequencing, and safety validation via APIs and IoT sensors.

  Built a backend battery data management system using databases (SQL/NoSQL) to track SoC, SoH, charging cycles, and usage analytics in real time.

  Implemented IoT communication using MQTT/REST APIs to integrate embedded controllers, BMS, and monitoring dashboards.

Achievements & Awards

- MaTPO Aptitude Idol 2025
- NXT WAVE Certification
- Smart Fault Diagnosis in Electrical Circuit Device Patent
